History

Since 1995, the company ERIPM, founded by Eric Plumacker, has been dedicated to the development of plastic products.

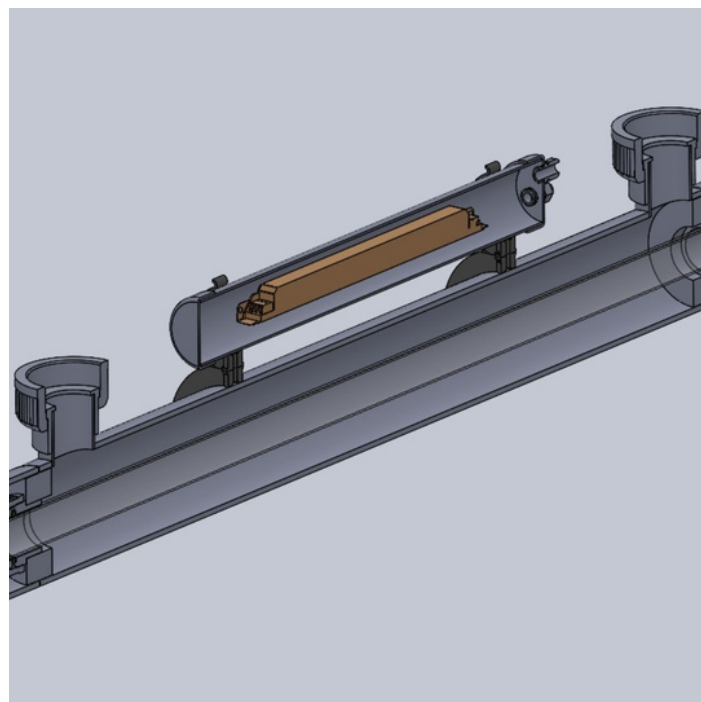

The growth of the activity led to move to more suitable facilities in Stembert and then in the Plenesses Zoning in Thimister in 2017.

The activity focuses on the machining and assembly of plastic materials, composites, metal, polyurethane, foam and wood.

Over the years, a team of 8 qualified people has been set up to guarantee the follow-up of orders. The machine park is expanding with the acquisition of a CNC lathe and a CNC machining center.

ERIPM moved to its own facility in the Eupen industrial zone in 2021 to continue growing its business.

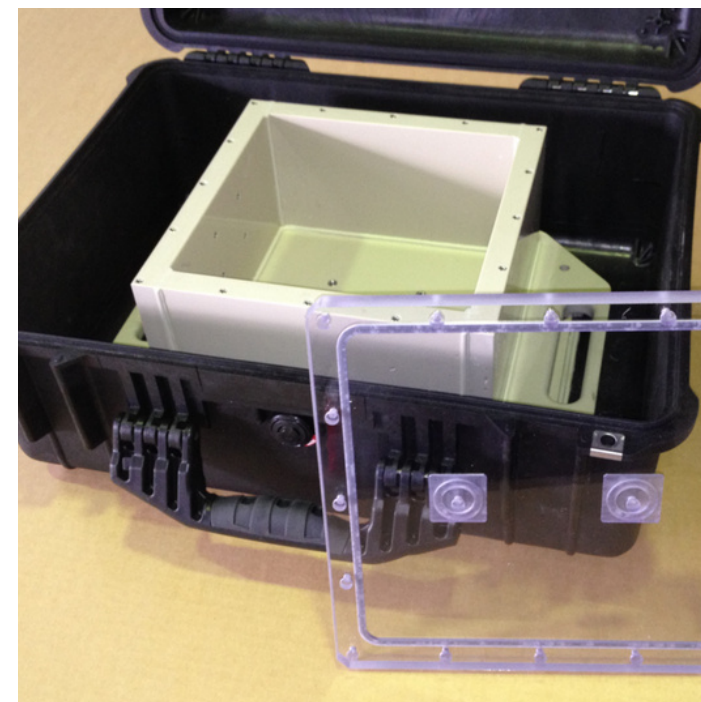

Services

Digital design

Machining

Multi-materials
assembly

Plastic welding

Materials

- **Thermoplastics standard** (PP, PE, PVC, POM, ABS, PS, PMMA, PC, PET)
- **Thermoplastics High Tech** (PEEK, PVDF, PTFE, TMP)
- **Thermosetting** (Resin polyester, vinylester, epoxy, silicone, fiberglass, carbon, aramid, permaglas, FR4, G11, EP GC 201)
- **Foam** (PET EPP, EPS, PUR, PVC expanded)
- **Metal – Aluminium**
- **3D Printing**

Sectors of activity

Chemistry

Pharmaceutical

Aeronautics

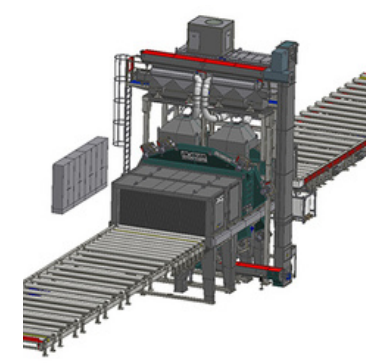

Food industry

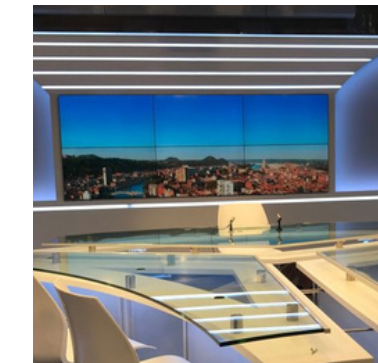

Automotive

Water treatment

Objectives

- **Transition to all-digital** centralization of information
- **Rationalization of processes** adaptation of operating ranges
- **Quality** ERP control and production monitoring
- **Organisation** methodology 5S
- **Energy management** green energy production and carbon impact reduction
- **Developpement** of new emerging markets
